6. Quick FAQs

## 1 – Introduction

Mouse Trap is a multi-catch mechanical trap designed for the containment of small mice and rats.

## 2 – Warnings and Safety

- Read the entire manual before using the device.
- The device is designed for mice and small rats. Do not use it for other sized animals.
- Keep out of reach of children.
- When using with anti-rot liquid, use only compatible, non-corrosive products; avoid contact with skin and eyes.
- Follow local laws regarding the handling and release of captured animals; dumping in the wild may be subject to regulations.

## 3 – Daily Use and Placement Tips

### 3.1 Where to Place the Trap

- Along walls: rodents follow edges.
- Near food sources and nests: kitchens, bins, storage rooms.
- In quiet, dark areas: less human traffic increases catches.
- Avoid direct exposure to the elements: if placed outdoors, protect it from direct rain.

### 3.2 Which Bait to Use

- Dried fruit, grains, feed, peanut butter, or a small piece of dried meat (depending on the local population). For liquid bait, use safe, non-corrosive products.

### 3.3 Best Practices

- Do not leave the trap unattended for long periods without monitoring.

## 4 – Maintenance and cleaning

1. Remove the bait drawer and empty it.
2. Clean the drawer with warm water and mild soap; rinse and dry completely.
3. Wipe the casing with a damp cloth and dry.

## 5 – Warranty and Support Contacts

- Warranty: 12 months from the date of purchase (standard conditions: manufacturing defects).
- Limitations: The warranty does not cover damage from misuse, immersion in water, or unauthorized modifications.
- Support Contacts:

## 6 — FAQ

### Can I use the device outdoors?

Yes, but protect it from direct rain; consider a case or indoor placement.

### Can I use the device outdoors?

Yes, the device is made entirely of plastic and has no electronic parts.

### Can I use the device in direct sunlight?

Yes, for a short period of time.

To ensure a longer lifespan, it is best not to expose it to direct sunlight for extended periods, especially in areas not suitable for rodents.
